Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: .compass. The compass consists of the compass card (Art. 44), one or more magnetic needles firmly attached to the lower surface of the card in a position parallel to the north and south line, and a bowl with a pivot at its center upon which the card turns--the whole being enclosed in the compass box. The angle between the ship s fore-and-aft line and the magnetic needle equals the arc between the north or south point on the circumference of the card and the point of the latter which is adjacent to a certain mark on the inner surface of the bowl (such that this mark and the pivot of the card are in the same plane with the ship s keel line). 54. Variation and deviation of the compass. The variation of the compass at a place is the angle through which the needle is deflected from true north by terrestrial magnetism alone (for details, see Art. 71). Thus, in a ship without any magnetic substance or motors, the needle lies in the magnetic meridian, whose angle with the true meridian is the variation of the compass. The true meridian of a place is the great circle passing through it and the earth s poles. As a modern ship contains considerable iron or other magnetic metal, and carries motors, there is an additional source of error in the ship s compass. The angle which the direction of the needle makes with the magnetic meridian is...
