The recording plate revolved once in 118 seconds, and the short radial lines mark successive seconds of time counted from the start. Ve can thus determine the magnitude and direction of motion at any instant during the earthquake, as vell as the duration, the intensity, and other elements of the shock. Below we give results deduced from the diagram. Time qf Occurrence. 1894, June 20th; 2 4 10 p.111. Horizontal Motion. The earthquake began as usual with tremors. The duration of tremors, as indicated by ordinary seismographs, lasted about 10 seconds. The Large Motion Seismograph does not record minute tremors, and the motion was already a few millimetres in range at the beginning of this diagmm. However, we shall take this latter point as the beginning of the earthquake. The motion, already strong in the 1st and 2nd seconds, became suddenly violent and the...
